A tempo: adversity accelerates the schedule
ACEs by age 18
$\bar{k} = 0$
$\bar{k} = 2$
$\bar{k} = 4$
$\bar{k} = 8$
annual birth probability
age (years)
B timing moves by a third, fertility by 2%
relative to $\bar{k} = 0$
27.7 yr
18.6 yr
mean age at childbearing
net reproduction
ACEs by age 18, $\bar{k}$
C quantum: $\alpha = 1.35$ redistributes births
exposed ($k \geq 1$)
unexposed ($k = 0$)
population total
fertility relative to $\alpha = 1$
share of the population exposed
D the empirical schedules
annual birth probability
survivorship
fertility $b_0(a)$
survivorship $l(a)$
age (years)
E within life: disjoint phases, $p = 0.05$, $q = 0.05$
gain an ACE (p)
lose an ACE (q)
annual probability
18
age (years)
F transmission between generations
child ACE count
maternal ACE count
probability
